

ABSTRACT OF THE DISCLOSURE

A program control information generator for realizing functions of high-speed generation and transmission of program control information and of an automatic adjustment of program information without interrupting the generation. In a broadcasting station system for broadcasting program control information, the program control information generator comprises an input section 101, a schedule adjustment section 102, a band adjustment section 103, a storage section 104, a difference detecting section 105, and a section generating section 106 in generating section data from program information and program schedule information inputted from a program organization apparatus, by which it is possible to provide a program control information generator which realizes a high-speed program control information generation and an automatic schedule adjustment method with a schedule overlap or an effective adjustment method of program control information in which a band over may occur.
